

RESULTS

- Reduce Maintenance and development cost
- Manage Security for patient information
- Centralize Data store

INDUSTRY: Healthcare

COUNTRY: United States

TECHNOLOGY ENVIRONMENT

- SQL Server
- SSIS
- SSRS
- ASP.net
- MS Excel
- SharePoint

Patients Data Management using SQL Server

Client

- Global leader in Healthcare services, headquartered in the US.

Business Requirements

- Maintain data warehouse named CDW (corporate data warehouse) which sources data used by medical staff in the form of files
- Perform Extract Transform and Load using SQL Server Integration Services (SSIS) from source data into CDW and further into Reporting Database
- Maintain the information of patients used for reporting using SQL Server Reporting Services (SSRS) and keep information updated and secure
- Centralize the data stores and improve the speed of information retrieval

Scope of Services

- Reduce the maintenance and development cost
- Medical staff use the reports for reviewing the patient's information to track their medical history and provide them needed care

Solution Highlights

- Futran Solutions developed new strategy to centralize the data store and improve security
- Futran Solutions implemented security on reports that hold sensitive information that should be visible only to the provider's team
